

string

stdexcept

exception.h

```
graph BT; exception_h[exception.h] --> string[string]; exception_h --> stdexcept[stdexcept];
```

The diagram illustrates the relationship between the C++ standard library headers. At the bottom, a black box labeled 'exception.h' has two blue arrows pointing upwards. One arrow points to a white box labeled 'string' on the left, and the other points to a white box labeled 'stdexcept' on the right. This indicates that 'exception.h' is a common base or prerequisite for both 'string' and 'stdexcept'.
